Comment: The tons of radioactive material from the Manhattan Project should be removed in total from the West Lake Landfill period. Scott Pruitt himself was quoted, saying, "A cap is not sufficient to protect the health of the citizens in the area." Thirty percent of tons of extraordinarily toxic material is still a huge amount of contamination that would remain in a major metropolitan region and would remain vulnerable to a fire. Why is a cap over 30 percent of the material acceptable when a cap over all of the material is not?
